

Q.1) Write a Python program to count the even, odd numbers in a given array of integers using Lambda.

CODE:

```
arr = [10, 21, 4, 45, 66, 93, 11]
count_even = lambda x: len(list(filter(lambda n: n % 2 == 0, x)))
count_odd = lambda x: len(list(filter(lambda n: n % 2 != 0, x)))
print("Even numbers count:", count_even(arr))
print("Odd numbers count:", count_odd(arr))
```

OUTPUT:

```
C:\Users\Admin\PycharmProjects\PythonProject6\Preparation\.venv\Scripts\python.exe C:\Users\Admin\PycharmProjects\PythonProject6\Preparation
Even numbers count: 3
Odd numbers count: 4

Process finished with exit code 0
```

Q.2) Write a Python program to find palindromes in a given list of strings using Lambda.

CODE:

```
ords = ["madam", "ono", "level", "friends", "radar", "sql"]
palindromes = list(filter(lambda x: x == x[::-1], words))
print("Palindrome strings:", palindromes)
```

OUTPUT:

```
C:\Users\Admin\PycharmProjects\PythonProject6\Preparation\.venv\Scripts\python.exe C:\Users\Admin\PycharmProjects\PythonProject6\Preparation\Q3.
Palindrome strings: ['madam', 'ono', 'level', 'radar']

Process finished with exit code 0
```

Q.4) Write a Python program to convert a byte string to a list of integers. Sample Input: "hello" Sample Output: [104, 101, 108, 108, 111]

CODE:

```
s = "System.out"
byte_list = list(map(lambda x: x, s.encode()))
print(byte_list)
```

OUTPUT:

```
C:\Users\Admin\PycharmProjects\PythonProject6\Preparation\.venv\Scripts\python.exe C:\Users\Admin\PycharmProjects\PythonProject6\Preparation\Q4.
[83, 121, 115, 116, 103, 104, 46, 111, 112, 116]

Process finished with exit code 0
```
